

Scan Report

May 12, 2024

Summary

This document reports on the results of an automatic security scan. All dates are displayed using the timezone “Coordinated Universal Time”, which is abbreviated “UTC”. The task was “Unnamed”. The scan started at Sun May 12 08:23:12 2024 UTC and ended at Sun May 12 08:59:53 2024 UTC. The report first summarises the results found. Then, for each host, the report describes every issue found. Please consider the advice given in each description, in order to rectify the issue.

Contents

1	Result Overview	2
2	Results per Host	2
2.1	10.0.2.4	2
2.1.1	Low 22/tcp	2
2.1.2	Low general/icmp	3
2.1.3	Low general/tcp	4

1 Result Overview

Host	High	Medium	Low	Log	False Positive
10.0.2.4	0	0	3	0	0
Total: 1	0	0	3	0	0

Vendor security updates are not trusted.

Overrides are off. Even when a result has an override, this report uses the actual threat of the result.

Information on overrides is included in the report.

Notes are included in the report.

This report might not show details of all issues that were found.

Issues with the threat level “Log” are not shown.

Issues with the threat level “Debug” are not shown.

Issues with the threat level “False Positive” are not shown.

Only results with a minimum QoD of 70 are shown.

This report contains all 3 results selected by the filtering described above. Before filtering there were 80 results.

2 Results per Host

2.1 10.0.2.4

Host scan start Sun May 12 08:24:54 2024 UTC

Host scan end Sun May 12 08:59:44 2024 UTC

Service (Port)	Threat Level
22/tcp	Low
general/icmp	Low
general/tcp	Low

2.1.1 Low 22/tcp

Low (CVSS: 2.6)
NVT: Weak MAC Algorithm(s) Supported (SSH)
Summary The remote SSH server is configured to allow / support weak MAC algorithm(s).
Quality of Detection: 80
... continues on next page ...

...continued from previous page ...

Vulnerability Detection Result

The remote SSH server supports the following weak client-to-server MAC algorithm $\hookrightarrow(s)$:

umac-64-etm@openssh.com

umac-64@openssh.com

The remote SSH server supports the following weak server-to-client MAC algorithm $\hookleftarrow(s)$:

umac-64-etm@openssh.com

umac-64@openssh.com

Solution:

Solution type: Mitigation

Disable the reported weak MAC algorithm(s).

Vulnerability Detection Method

Checks the supported MAC algorithms (client-to-server and server-to-client) of the remote SSH server.

Currently weak MAC algorithms are defined as the following:

- MD5 based algorithms
- 96-bit based algorithms
- 64-bit based algorithms
- 'none' algorithm

Details: Weak MAC Algorithm(s) Supported (SSH)

OID:1.3.6.1.4.1.25623.1.0.105610

Version used: 2023-10-12T05:05:32Z

2.1.2 Low general/icmp

Low (CVSS: 2.1)

NVT: ICMP Timestamp Reply Information Disclosure

Summary

The remote host responded to an ICMP timestamp request.

Quality of Detection: 80

... continues on next page ...

...continued from previous page ...
Vulnerability Detection Result The following response / ICMP packet has been received: <ul style="list-style-type: none"> - ICMP Type: 14 - ICMP Code: 0
Impact This information could theoretically be used to exploit weak time-based random number generators in other services.
Solution: Solution type: Mitigation Various mitigations are possible: <ul style="list-style-type: none"> - Disable the support for ICMP timestamp on the remote host completely - Protect the remote host by a firewall, and block ICMP packets passing through the firewall in either direction (either completely or only for untrusted networks)
Vulnerability Insight The Timestamp Reply is an ICMP message which replies to a Timestamp message. It consists of the originating timestamp sent by the sender of the Timestamp as well as a receive timestamp and a transmit timestamp.
Vulnerability Detection Method Sends an ICMP Timestamp (Type 13) request and checks if a Timestamp Reply (Type 14) is received. Details: ICMP Timestamp Reply Information Disclosure OID:1.3.6.1.4.1.25623.1.0.103190 Version used: 2023-05-11T09:09:33Z

2.1.3 Low general/tcp

Low (CVSS: 2.6)
NVT: TCP Timestamps Information Disclosure
...
... continues on next page ...

...continued from previous page...	
Summary	The remote host implements TCP timestamps and therefore allows to compute the uptime.
Quality of Detection: 80	
Vulnerability Detection Result	<p>It was detected that the host implements RFC1323/RFC7323.</p> <p>The following timestamps were retrieved with a delay of 1 seconds in-between:</p> <p>Packet 1: 2177200</p> <p>Packet 2: 2177468</p>
Impact	A side effect of this feature is that the uptime of the remote host can sometimes be computed.
Solution:	
Solution type: Mitigation	<p>To disable TCP timestamps on linux add the line 'net.ipv4.tcp_timestamps = 0' to /etc/sysctl.conf. Execute 'sysctl -p' to apply the settings at runtime.</p> <p>To disable TCP timestamps on Windows execute 'netsh int tcp set global timestamps=disabled'</p> <p>Starting with Windows Server 2008 and Vista, the timestamp can not be completely disabled.</p> <p>The default behavior of the TCP/IP stack on this Systems is to not use the Timestamp options when initiating TCP connections, but use them if the TCP peer that is initiating communication includes them in their synchronize (SYN) segment.</p> <p>See the references for more information.</p>
Affected Software/OS	TCP implementations that implement RFC1323/RFC7323.
Vulnerability Insight	The remote host implements TCP timestamps, as defined by RFC1323/RFC7323.
Vulnerability Detection Method	<p>Special IP packets are forged and sent with a little delay in between to the target IP. The responses are searched for a timestamps. If found, the timestamps are reported.</p> <p>Details: TCP Timestamps Information Disclosure</p> <p>OID:1.3.6.1.4.1.25623.1.0.80091</p> <p>Version used: 2023-12-15T16:10:08Z</p>
